

Spanish Tile

by
Future Roof
Systems

*Esthetically Pleasing
Lightweight
Durable*

Spanish Tile by Future Roof Systems is a metal roofing panel with deep continuous "S" folds producing an esthetically pleasing tile configuration. The panel is installed vertically up the roof from the eave to the ridge. The roof has exposed colored-to-match fasteners and is installed over a solid deck with a minimum 30 # felt underlayment. It's lightweight, allows installation over existing composition roofs without the need for tear-off and disposal (subject to local codes). Typical applications for Spanish Tile are commercial and residential roofing with a recommended minimum pitch of 3:12 and up. Spanish Tile has the look of clay or concrete tile roofs without the problems associated with weight. In most cases Spanish Tile by Future Roof Systems is 1/10 the weight of these products. No structural reinforcement is required on re-roof applications.

Spanish Tile by Future Roof Systems has achieved a UL Class 4 Hail

Resistance rating (the highest rating), will withstand hurricane force winds and driving rains. The Spanish Tile design allows vertical and horizontal airflow between the panel and substrate. When you combine this with our Energy Star coating the customer will realize a significant savings in cooling and heating costs over the years ahead. Spanish Tile can be used both on commercial and residential roofing.

Why choose ENERGY STAR reflective roofing for your building?

* ENERGY STAR qualified roof products reflect more of the sun's rays. This can lower roof surface temperature by up to 100F, decreasing the amount of heat transferred into a building.

* ENERGY STAR qualified roof products can help reduce the amount of air conditioning needed in buildings, and can reduce peak cooling demand by 10-15 percent.
